METODI QUANTITATIVI

Prof. Gary Thompson – University of Arizona

Machine Learning: new tricks for econometrics

Prof. Gary Thompson

is a Full Professor and Department Head at the Department of Agricultural & Resource Economics of The University of Arizona.

His research focuses on consumer demand for all sorts of products, from residential water to organic foods. He is currently working on projects analyzing consumer demand for fruits and vegetables, food safety, and health concerns and applying microeconomic methods to analyze these food and resource questions.
